--Poly(lactide) whiskers are prepared with average dimensions of about 5-100 µm diameter by 10-250 µm length. The whiskers are mixes with poorly crystalline hydroxyapatite paste prepared as described above at a concentration 10% wt/wt. The composite paste is hardened overnight at 37 °C in moist environment. When tested for compressibility, there is found to have improved compressibility over the non-composite PCA calcium phosphate.--
